SUMMARY

Data-driven third-year Data Science student with experience building end-to-end data pipelines and handling large-scale datasets. Skilled in developing scalable data workflows and transforming raw data into structured insights, with a strong interest in data engineering and real-time data processing.

EDUCATION

Industrial University of Ho Chi Minh City – IUH <i>Engineering Degree in Data Science — GPA: 3.6/4.0</i> • Achievements: Academic Excellence Scholarship for 3 consecutive semesters (Top GPA performance, 2024–2026).	Jan. 2023 – Jan. 2028 (Expected) <i>Ho Chi Minh City, Vietnam</i>
---	---

TECHNICAL STACKS

Programming Languages: Python, Java.
Databases: SQL Server, PostgreSQL.
Data Engineering: Apache Spark, Kafka, Airflow.
Data Acquisition & ETL: ETL / ELT Pipelines, Web Scraping, CDC.
Data Visualization: Power BI, Microsoft Excel (Pivot Tables, Lookup Functions).
Developer Tools: Git, GitHub, Docker.

EXPERIENCE

AI/Data Intern <i>NovaHA</i> • Collected and curated 1,000+ images from diverse sources, ensuring high-quality datasets for model training. • Developed data pipelines for cleaning, labeling, and structuring image data, reducing manual processing time by 40%. • Implemented Neural Style Transfer using PyTorch to generate stylized images for content experimentation. • Integrated AI-generated images into web systems, enabling scalable content generation.	Dec. 2025 – Mar. 2026
Software Developer Intern <i>ACT4 Trading and Service</i> • Developed web forms with full CRUD functionality, improving data validation and storage efficiency by 30%. • Built approval workflows based on business rules, enhancing internal process efficiency by 25%. • Collaborated with team members to resolve bugs and prepare features for deployment, reducing deployment time by 20%.	Aug. 2025 – Nov. 2025

PROJECTS

Banking Data Pipeline • Built a real-time data pipeline using Kafka, Debezium, and PostgreSQL to capture and stream transactional data, enabling near real-time data availability. • Modeled and transformed data in Snowflake using dbt with Medallion architecture and SCD Type-2 for efficient historical tracking. • Automated ETL workflows with Apache Airflow, improving pipeline reliability and reducing manual intervention. • Implemented CI/CD pipelines using GitHub Actions, ensuring consistent and automated deployment of data workflows.	View Project
Customer Churn Prediction System • Built an end-to-end churn prediction pipeline processing 400K+ records using Apache Spark for data preprocessing and feature engineering. • Trained and evaluated models (Logistic Regression, Random Forest, XGBoost, Decision Tree), selecting XGBoost as the final model with AUC 0.9486, and tracked experiments using MLflow. • Developed a real-time inference system using FastAPI + Redis for low-latency prediction serving. • Deployed the model via Databricks Model Serving and the full-stack application on AWS EC2 using Docker, enabling real-time churn prediction and user interaction.	View Project

CERTIFICATIONS

TOEIC – Score: 775	Jul. 2025
Microsoft Office Specialist (Word & Excel)	Jan. 2023

LANGUAGES

English: Professional Working Proficiency.
